

What Is the Extreme Event Game?

Extreme Event is an award-winning in-person role-playing game that gives participants a taste of what it takes to build community resilience in the face of disaster. Players work together to make decisions and solve problems during an engaging, fast-paced disaster simulation.

Developed by the National Academy of Sciences' Koshland Science Museum (now LabX) in collaboration with the ResilientAmerica Roundtable, Extreme Event's content draws on recommendations from the seminal National Research Council report Disaster Resilience: A National Imperative and has been reviewed by experts and staff of the National Academies.

RECOMMENDED, BUT OPTIONAL

6 electronic devices for students
(tablets, laptops, computers, cell phones)

1 electronic device for teacher

access to WiFi

WEBQUEST

**A remote learning challenge
for students from middle
school through college**

Disasters are a fact of life. By building more resilient individuals and communities, we can reduce the toll of these events and bounce back more quickly. This webquest stimulates critical thinking about how to prepare for disasters and increase resilience in communities.

This webquest is designed to engage and challenge students from middle school through college. Because disasters affect many facets of life, the content fits well with many subject areas, from science to social studies. Students use a variety of online resources including videos, games, and reference materials to gather information as they complete a series of activities. The webquest involves a combination of guided research, individual tasks, and group collaboration.
